## EXPERIENCES

**oneSlash (Startup)** **November 2024 - Present**
*Software Engineer* *Remote*

- Built and deployed an admin dashboard for Commentify with **Next.js**, **React**, and **Tailwind CSS** for frontend, and **Express** for the backend to provide real-time data metrics and user management, improving internal decision-making and performance monitoring
- Designed and implemented a refresh token mechanism using **TypeScript** and **AWS Lambda** for Commentify, ensuring secure and reliable user authentication
- Researched and applied OAuth 2.0 standards, contributing to the implementation of Atlassian and Figma APIs for seamless user access and authentication workflows
- Designed a scalable database for billing information and implemented Stripe integration to enable secure subscription management and seamless payment processing

**Varis (Office Depot Subsidiary)** **August 2021 – July 2023**
*Software Engineer 1 // Backend* *Remote*

- Communicated with the product owner, engineers, and QA team to integrate business requirements and translate them to functional requirements in the financial workflow for B2B eProcurement platform
- Designed, developed, and tested robust **RESTful APIs** in **Go** for multiple **microservices** on the Finance team, utilizing **MongoDB** and **PostgreSQL** for database operations
- Achieved and maintained exceptional **over 90% code coverage** across 15 microservices, ensuring reliability and stability of critical backend services by implementing comprehensive **unit tests**
- Automated and managed over 40 repositories by **developing a custom Bash script**, streamlining security compliance tasks, cutting task completion time in half by auto-generating pull requests and updating dependencies
- Provided critical **on-call support** in the production environment, effectively troubleshooting and resolving bugs by analyzing logs in **New Relic**, writing **SQL** queries to identify and resolve affected records in the database, and using **Temporal** to manage workflows

*Software Engineer 1 (Part-Time)*

- Implemented thorough **integration testing** utilizing **Postman** to validate diverse use cases and **load testing** using **k6** to ensure the reliability and scalability of the payments and tax microservices
- Leveraged **Git** and **Agile Scrum** methodologies to facilitate efficient collaboration with team members to ensure the delivery of high-quality, production-ready, testable code and continuous improvement
- Documented APIs using **Swagger** to ensure clear communication between development teams

## EDUCATION

**University of Minnesota - Twin Cities** **December 2021**
*Bachelor of Science in Computer Science (GPA: 3.62/4.00)* *Minneapolis, MN*

## SKILLS

| | |
|---|---|
| **Languages** | Golang, Java, SQL, Python, Bash, Typescript, C# |
| **Tools** | Git/GitHub, JIRA, New Relic, Jenkins, Postman, k6, Snyk, Codacy, OpsGenie, Swagger |
| **Technologies** | Rancher, Docker, Kafka, Temporal, MongoDB, .NET, PostgreSQL, React |
